

ELD | Benefits Beyond Compliance

THE ELD MANDATE IS COMING

2015

The mandate requiring electronic logging devices (ELDs) is expected to be published in September 2015. If not currently using a device, fleets will have 2 years to implement. Don't wait until the last minute and be forced to rush into an implementation just to comply with the pending government regulation. Implement electronic logging devices in your fleet on your schedule, and start realizing benefits that go far beyond compliance.

BENEFITS THAT GO BEYOND COMPLIANCE

ELDs help you manage and improve your CSA Scores. They have an immediate and positive effect to several categories. This includes: Unsafe Driving, Hours of Service Compliance, Vehicle Maintenance and More!

Analytics solutions built into some solutions give fleet managers and drivers insight into vehicle and driver performance that helps maximize fleet efficiency and profitability. Most ELDs deliver a near immediate ROI.

Navigation solutions offer route-mapping options that optimize fuel and improve efficiency. Navigation also provides voice guidance to maximize driver productivity, as well as load-specific routing.

Vehicle Inspection Reporting replaces paper logbooks to reduce errors, and allows fleets to search, edit, export, and print data and reports.

Fault Monitoring reduces repair costs by notifying drivers of maintenance issues before they turn into expensive breakdowns.

Unsafe driving reports promote safety through alerts related to hard-braking, speeding, and other driver initiated behaviors. Reports also help safety managers coach drivers.

BENEFITS FOR FLEET MANAGERS

Fleet managers can see a driver's HOS status and location, keeping everyone on the same page of how many hours are available for on-duty and drive time.

Customizable and on-board training materials make it easy for drivers to quickly understand how to use the applications before they start their first assignment.

BENEFITS FOR DRIVERS

Drivers receive assignment via electronic logging device and start driving. Hours are automatically tracked with the ELD.

Drivers complete vehicle inspection report via mobile device or directly from the ELD using the Vehicle Inspection Report application.

BENEFITS FOR THE WHOLE FLEET

Back office receives the drivers' hours and DVIR information. Fleet managers can see how many hours are available for each driver, who has completed inspection reports and whether vehicle defects are open or closed.

Roadside inspections are simplified, and violations resulting from human error are eliminated.

KEEP MORE ACCURATE AND COST-EFFECTIVE LOGBOOKS

15
MINUTES

Reduce the time drivers spend updating their logbooks by up to 15 minutes per day.²

6
MONTHS

Eliminate the cost of paper forms and the clerical work required to file paper logbooks by six months, as well as the clerical work required to respond to a DOT audit of logbook records.²

-75%
OVER-HOUR VIOLATIONS

Cargo Transporters decreased over-hour violations by 75% and saved \$100,000 in administrative expenses with Hours of Services Application.
